Vibe Coding- Day 01

Set Up GitHub

Step 1: Create a GitHub Account

1. Go to **https://github.com**
2. Click **Sign up**
3. Enter:
    - Email
    - Password
    - Username
4. Verify email and complete signup.

Step 2: Install Git (Required)

1. Go to **https://git-scm.com/**
2. Download Git for Windows.
3. Install with default settings.
4. After installation, open **Command Prompt** and check:

```
git --version
```

If it shows a version number → Installed correctly.

Step 3: Configure Git (One-Time Setup)

```
git config --global user.name "Your Name"
git config --global user.email "your_email@example.com"
```

Download & Install VS Code

Step 1: Download

1. Go to **https://code.visualstudio.com/**
2. Click **Download for Windows**
3. Install with default settings.
4. Make sure you check:
   "Add to PATH"
   "Register Code as editor"

Step 2: Open VS Code

Launch VS Code after installation.

Set Up GitHub Copilot

GitHub Copilot is developed by GitHub and works inside VS Code.

Step 1: Install Copilot Extension

1. Open VS Code
2. Click **Extensions (Left Sidebar)** or press Ctrl + Shift + X
3. Search: **GitHub Copilot**
4. Install **GitHub Copilot** (by GitHub)

Step 2: Sign In

1. Click **Sign in to GitHub**
2. Authorize VS Code in browser
3. Return to VS Code → Copilot is ready.

Install Gemini CLI

Gemini is developed by Google.

You need **Node.js** first.

Step 1: Install Node.js

1. Go to https://nodejs.org/
2. Download **LTS version**
3. Install with default settings
4. Check installation:

```
node -v
npm -v
```

Step 2: Install Gemini CLI

Open Command Prompt or VS Code Terminal and run:

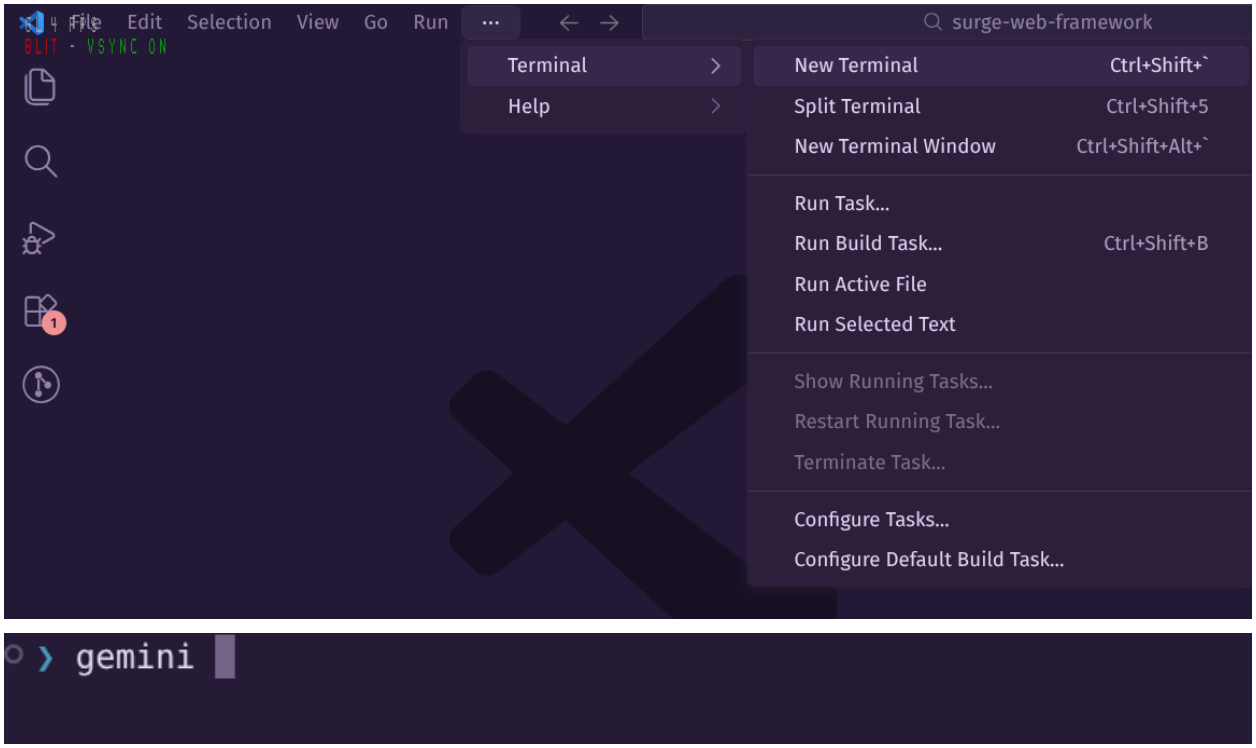
```
npm install -g @google/gemini-cli
```

Step 3: Test Gemini CLI

```
gemini --help
```

If it shows commands → Installed correct

Step 4: Open VsCode and open a new terminal window then start the gemini-cli



Step 5: Install the necessary extensions for VsCode

Step 6: Use Google account to login and configure the gemini-cli credentials

Task of the Day

1. Prompt AI to generate a **Student Profile Card** with:

    - Name
    - Stream
    - Short bio
    - Profile image placeholder

2. Save the file as index.html and open it in a browser.

3. Identify:

    - structure
    - <head> section
    - CSS styling section

4. Improve the design:

    - Add rounded corners
    - Add shadow
    - Change font
    - Add gradient background

Submission

Create a one page reflection report. Your report should include the following

- Prompts you have used
- Link to the Github Repository
